R > REQUESTS made by OPAC users

This report shows all requests made by patrons (using the G > Request Item option in the Public Catalog) that the library decided to accept (i.e., place holds on or print paging slips for). Data is available for the current and last month's request activity. Note that the data is only available if patrons are being verified while requesting an item. There are six reports:

- A two-dimensional report giving statistics on requests for items for each library location, broken down by the home library of the patron making the request
- A report giving statistics on requests for "copy returned soonest", broken down by the home library of the patron making the request
- A report giving statistics on requests by the patron type
- A report giving statistics on requests by the item type
- A report giving statistics on accepted requests by statistics group number of the terminal from which the request was placed
- A report giving statistics on requests by statistics group number, broken down by the patron type of the patron making the request

...

Following the monthly display, you will be prompted:

Display actual requests accepted? (y/n)

If you type **y**, you will see a list similar to the one below:

```
