Kansas City Cluster Catalogers Committee
Meeting Minutes
May 8, 2015
Jannes Library at KCAI

In attendance: Jennifer Peters-Rockhurst, Maggie Mueller-SPST, Ted Ostaszewski-MCCC, Lora Farrell-KCAI

Minutes of January 23rd 2015 meeting approved
Report of MCDAC meeting on April 10th, 2015

- Old business:
    - Staff updates/changes: Ted Ostaszewski is retiring on June 30th; MCCC may be changing the position description once he has left; Stephanie DeClue at William Jewell has accepted a new position and will no longer work in the MOBIUS system
    - KC Cat Cluster minutes have been sent to MOBIUS
    - "Internet Resource": icon – Lora was interested in this as some things are not eBooks or eJournals
    - MARC 020 lines – note the advantage of leaving in an 020 |z for eBooks is that it allows for searches against your catalog to let you know if you have the print or electronic version of a title when you are shopping for the title in a different format. i.e. retention of ISBNs of different formats in the same bib can help alert staff to the exist of the title in at least one format
    - Lora to send link for title Differences between changes within

- New Business
    - MCDAC no longer meeting. April 10, 2015 MCDAC meeting, review of the Governance report noted that some committees were being dissolved. New committee will be called the
      User Discovery and Metadata Committee.
    - Coordinator for the KC Cluster – we've been in some flux this past year with new additions to the cluster (Park University) and some staff leaving the cluster.   Lora to be the coordinator for the Cluster again this year.
        - MCDAC will no longer meet, but the KC Catalogers group can continue to meet 4 times per year
    - Meeting times: meeting attendees were open to meeting on Friday afternoons in order to accommodate other cluster members that can not meet on Friday mornings
    - SCAT Table: Jennifer Peters at Rockhurst has been working with Kathleen at Avila on this.

- o Subject groupings in Library of Congress; Logan spent a lot of time on the B section. Lectionary books are in different areas. It's a statistical category analysis table. Look at the Web Management reports. Jennifer is willing to send along her notes as things progress
- Summary screen in Sierra – can we have a column added to show item Status (i.e. Missing, in repair, et c...) Lora to email cluster then MOBIUS with this request and include a screenshot.
- Jennifer Peters will be at the Conference as will Lora; Lora to moderate a panel on SkyRiver. Question for MOBIUS: can we have more than one 001 line? Also, will the lack of an OCLC# affect enhanced matching in the Union Catalog or anything else?

Member reports:

Maggie at SPST – they are still trying to address all of the materials stored at their Truman Road storage. Some have been sold to a bookseller; some special collections are moving to Oklahoma State

Additional notes:
- Authority Control – if BCODE3 is set to z then the record is not sent for authority control
- A request has been made to MOBIUS for more training documents on the website. The MOBIUS website is currently being worked on and changed so it is uncertain if more training documents will be added
  - o More schools entering the cluster affects our collective database which is all the more reason for having training documents posted
  - o Cataloging training – Rockhurst expressed a willingness to host and to contact MOBIUS with a request for training.
  - o As a cluster, what we would need to do is compile a list of the things that we need more training on. Things such as: merging records, authorities training, 229 lines. We need to keep brainstorming in order to determine what training would benefit us the most. One example would be How to do Patron Loads
- Rockhurst buys EBSCO eBooks individually, approximately 300 per year; they use ECM. Sometimes a subscription title should be showing up in the local catalog that is not. They are having to address this by discovering one by one that the title that should be there is not.
- Sage eBooks – access issues with IPs are still not worked out. Are they in the Union Catalog?
- Nazarene University is joining our cluster

- Linked data – there was a discussion about Linked data which is a bib picture concept regarding where catalos are in the future. Would look more like Google with library results at the top. Currently, catalogs are closed systems. What we want is to open things up. There's a pre-conference on linked data. FRBR is the foundation of this. RDA is moving this forward. Will MARC ever go away (there's a presentation on this that had something to do with Jack and Jill). Why not build our data better so that it's accessible and not in a closed concept. Why is our data only available on this platform.
    - Disambiguation |e –relator terms – with RDA every author should have on authority record. With Linked Data, providing authoritative data to the web –
    - Another example would be the move away from linked data by switching from OCLC to SkyRiver – now current holdings are not being added to OCLC which means they will not appear in Worldshare – which means that other users will not discover them nor will they be able to request them, because your materials will be on an even more closed platform.
- Statistics Tip: Go to Sierra → Reports → Session Statistics → Check Cumulative → Refresh Table
    - You can set this up to print to email. You need to have print to email set up in web based admin in order to use this option
