

Standard for Adding Paperbacks

- A paperback "edition" of a work previously published in hardcover may be added to the record for the hardcover publication if the paperback "edition" differs from the hardcover only in one or more of the following ways:
 - The paperback has a different ISBN.
 - The paperback contains an edition statement that does not suggest a difference in content, such as "Paperback edition."
 - The paperback bears a different publication date, but also contains a statement referring to the hardcover edition, such as a copyright date corresponding to the hardcover publication, or a statement such as, "Originally published in hardcover 1998."
- If you decide to add a paperback printing to the record for the hardcover publication, and if the paperback has a different ISBN, add an 020 field with the paperback's ISBN, followed by a space, followed by the qualifier "(pbk.)," thus:
020: : |a 12345678 (pbk.)
- A difference in pagination may or may not call for a new record. In general, if you can account for the difference in pagination based on the numbering/lack of numbering of pages of front or back matter, then the paperback may be added to the hardcover record. For instance, if it appears that the paperback numbers the pages of the index, and that the hardcover did not, go ahead and add the paperback to the existing record.
- A paperback edition should **not** be added to the record for a previous hardcover publication if the paperback differs from the hardcover in any of the following ways:
 - The paperback is published by a different publisher.
 - The paperback contains an edition statement that indicates it has been revised, updated, expanded, corrected, condensed, or otherwise changed from the form of the hardcover publication.
 - The paperback contains a foreword, introduction, conclusion, afterword, analysis, summary, or other material not appearing in the hardcover edition.
