

MOBIUS Catalog Design Advisory Committee (MCDAC)
End-of-Year Report, 2008/2009

During 2008/2009, the Catalog Design Advisory Committee formally met three times, in July, November and March. During the year the committee:

- Recommended the addition of 5 new indexes to the online catalog;
- Added a new cluster and institution page to the catalog's "What's my cluster?" feature;
- Resolved several helpdesk tickets resulting from the transition to WebPac Pro;
- Added a "sort by date" feature to author and title searches in the union catalog;
- Resolved a problem that caused misleading browse displays on the union catalog;
- Appointed a subcommittee to work on reprofiling for Backstage authority control and updating MOBIUS policies on authority control;
- Recommended the appointment of a task force for redesigning the MOBIUS catalog; and
- Arranged a product demo for LocalURL, a product which may solve a persistent problem regarding the display of URLs in the central catalog.

Evaluation of LocalURL is ongoing. We currently are awaiting pricing information from III.

Respectfully submitted,
Stephen Wynn
