The coordinators present were Victoria Johnson (Drury), Corky McCormack (OTC), Barbara Schade (Crowder), Wendy McGrane (MSSC), Coleen Rose (SBU), and David Adams (SMSU). Linda Henderson and Susan Huston from MSSC were also in attendance.

We discussed the problem that a call number browse does not list the title. Since the understanding was that nothing could be done other than perhaps a future enhancement, we decided to drop the issue. Also the problem was brought up that there is no call number search choice in the drop down menu on SWAN. Because the call number search does not produce the desired results, we did not want to pursue adding it to the drop down menu. Wendy will call MCO about this problem.

Victoria brought to our attention that some staff have problems with their search timing out too soon. We decided to recommend that the time out setting be changed from 600 to 1200. We weren't sure when the timing starts.

We talked some about the cleanup of create list files. We agreed that we need to remind everyone about the protocol for naming our files and that this should be posted to the SWAN cluster site on MOBIUS unless it was already posted on the MOBIUS site.

Victoria reported that Web Management Reports are broken and in III software engineering; you can get a list but that you can't download it.

Coleen asked how to determine how may titles you have added in a certain amount of time. One suggestion was to export a list of the items added to Microsoft Access and then use the duplicate function to delete duplicate titles. Vicky will work on a good method for collecting title & volume statistics.

We discussed whether or not to turn off the last patron record function. SMSU uses the "time to shelve" function which is tied to the last patron. Coordinators knew the wishes of their institution; we took a vote based on how the library director had asked them to vote. The vote was four to two in favor of retaining the last patron function. The issues can be addressed again if needed.

David explained that the screen wording on the "View your own record" screen can be confusing and he will work on some better wording for us to consider.

In discussions not directly related to SWAN, we found out that SBU, Drury, and SMSU all use Easy Proxy though it seems to be set up differently. Victoria said that the library at Drury is unhappy with Serials Solution and she will look at a free alternative that is being used at Maryville in St. Louis. Wendy said that MSSC is considering the use of Screen Door to keep out traffic from specific websites. Wendy asked if anyone was using software to deter/detect plagiarism. Barbara said that Crowder was using www.turnitin.com.

The next meeting will be June 20 at 10 a.m. at MSSC.
